

FEDERACION NACIONAL DE CAFETEROS DE COLOMBIA

**ANUARIO
METEOROLOGICO**

1970

TOMO I I

FEDERACION NACIONAL DE CAFETEROS DE COLOMBIA

ANUARIO METEOROLOGICO

PARA EL AÑO 1.970

PREPARADO POR EL PERSONAL DE LA SECCION DE
AGROCLIMATOLOGIA

DEL CENTRO NACIONAL DE INVESTIGACIONES DE CAFE

SE CANJEA CON PUBLICACIONES DE LA MISMA INDOLE.

DIRECCION: CENTRO NACIONAL DE INVESTIGACIONES DE CAFE.
ADDRESS: SECCION DE AGROCLIMATOLOGIA - CHINCHINA - CALDAS
COLOMBIA.

Damos nuestros sinceros agradecimientos al personal del departamento de sistematización de datos de la Federación Nacional de Cafeteros y especialmente a su Jefe señor Hernando Talero G. por la valiosa y oportuna colaboración, no solo en la implantación del sistema electrónico en el proceso de los datos meteorológicos, sino en la preparación de la presente publicación.

Igualmente agradecemos al doctor Jorge Castillo Caicedo, Master en sistematización quien diseñó y analizó los distintos programas utilizados en la implantación de este sistema.

FE DE ERRATAS

En los cuadros estadísticos
donde dice: TENSION m.m.,
Léase: TENSION m.b.

I N T R O D U C C I O N

El procesamiento de la información climatológica que se recolectaba en las estaciones de la Federación hacía necesario la elaboración de numerosos chequeos y cálculos manuales que no solamente retrasaban considerablemente la oportuna publicación y aplicación de los datos sino que requerían la utilización de numeroso personal para realizarlos; esto llevó a la Federación a acometer el estudio de un sistema que permitiera el archivo y el procesamiento electrónico de tal información, acelerando de esta manera el proceso de cálculo.

El primer fruto de este estudio es el presente anuario, procesado totalmente en un computador IBM / 360 y que constituye la etapa inicial de un plan para la utilización masiva de la información climatológica que actualmente está siendo incorporada a un archivo magnético.

Equipo utilizado.

En la red meteorológica se utilizó el siguiente equipo para la obtención de los valores de los distintos elementos:

Elemento	Tipo instrumento
Temperatura	Termómetros de Mercurio y Alcohol
Humedad Relativa	Psicrómetro Assmann
Tensión del Vapor	Cálculo
Punto de Rocío	Cálculo
Precipitación	Pluviografo Hellman
Presión Atmosférica	Barómetro de Mercurio
Viento	Anemografo universal y Veletas
Evaporación	Evaporímetro de Balanza
Nubosidad	Observación personal
Brillo solar	Heliógrafo Campbellstokes
Radiación global	Actinógrafo Robitzsch

NORMAS GENERALES.

En todas las estaciones se efectúan tres observaciones diarias a las 07.00, 14:00 y 20:00 horas.

Los datos observados y las gráficas de registro continuo de los aparatos de las distintas estaciones se remiten continuamente al Observatorio de Chin chiná donde se realizan las operaciones de chequeo y confrontación de cada fenómeno en cada observación.

PROMEDIOS

Los promedios diarios de la presión atmosférica (reducida a cero grados centígrados y gravedad normal) de la humedad relativa, de la tensión vapor y de la nubosidad, se calculan con base en la media aritmética de las tres observaciones realizadas:

$$\frac{07+14+20}{3}$$

El promedio de la temperatura se tiene según la fórmula

$$\frac{07+14+20+20}{4}$$

Las medias mensuales y anuales de los elementos referidos se obtienen de modo similar al promedio diario.

La cantidad de lluvia (altura en mm; superficie receptora aprox. 1 metro de altura y de unos 300 cm² es la suma de las cantidades caídas entre las 07 del día siguiente, anotando el total para el primer día.

CLASIFICACION DE LAS ESTACIONES METEOROLOGICAS.

1.- Estaciones de I Orden.

En las estaciones de I orden se obtienen los valores de los siguientes elementos: precipitación, temperatura máxima, temperatura mínima, oscilación de la temperatura, humedad relativa, tensión del vapor, punto de rocío, vientos (dirección y fuerza) evaporación, nubosidad, brillo solar, presión atmosférica y radiación global.

2.- Estaciones de II Orden.

En estas estaciones se obtienen los mismos valores que en las estaciones de I orden a excepción de la presión atmosférica y la radiación global.

Algunos de estos elementos son observados en aparatos de medida directa y

en registradores. Otros son calculados como la tensión del vapor y punto de rocío, con base a las temperaturas del termómetro seco y húmedo del psicrómetro.

3. - Estaciones de III Orden.

Estas estaciones llamadas también heliopluiográficas registran los valores de precipitación y brillo solar.

4. - Puestos Pluviométricos.

Los datos de los puestos pluviométricos, instalados en su mayoría en fincas de caficultores, quienes atienden estas observaciones en colaboración directa con nuestro servicio por intermedio de los Agrónomos del Servicio de Extensión de la Federación, en los distintos Departamentos, se presentan en forma de totales diarios y mensuales con la correspondiente suma anual. Se publican en el tomo dos del Anuario.

PRESENTACION DE LOS DATOS.

Los datos de las observaciones se presentan según los siguientes cuadros estadísticos:

1. - Datos Diarios

Se presentan para cada mes las observaciones realizadas en todas las estaciones. Cada cuadro mensual comprende además de la información diaria un resumen donde se tiene el valor medio, máximo y mínimo de cada elemento.

1.1. - Presión Atmosférica.

Se dan los valores medios diarios en milímetros de mercurio.

1.2. - Temperaturas

Fuera de los valores de la temperatura ambiental media diaria, se dan también los valores diarios absolutos (máximo y mínimo). Igualmente se tiene la oscilación diaria, o sea la diferencia entre el máximo y el mínimo.

1.3. - Humedad Relativa.

Con base a las observaciones en el termómetro seco y el termómetro húmedo del psicrómetro, se calcula la humedad relativa de cada Observación. Con

estos valores se obtiene la media diaria, la máxima y la mínima, que son las que se presentan en este Anuario.

1.4. - Tensión del Vapor

En el mismo cálculo de la humedad relativa se obtienen los valores medios diarios, máximos y mínimos de la tensión del vapor para cada observación. Estos valores se dan en milibares.

1.5. - Punto de Rocio.

Se publica el valor de la media diaria, aplicando la fórmula general para los demás elementos.

1.6. - Precipitación.

Se anotan las cantidades de lluvia correspondientes al día y a la noche: en la columna "total" se indica la suma de lluvia computada para cada día (7 a. m. de un día a 7 a. m. del día siguiente). Al final de la columna se coloca el valor máximo diario obtenido en el mes, el valor mínimo y el total mensual en milímetros.

1.7. - Vientos.

Diariamente se anota la dirección y su intensidad (tomada entre 8 y 12 metros de altura) según la escala Beoufort, con el fin de facilitar el manejo estadístico se codifican las direcciones del viento así: N=16; E=04; S=08; W=12; calma = 00 y todos los vientos compuestos intermedios. Se publica el viento dominante en la mañana, en la tarde y en la noche para cada día. Las dos primeras posiciones significan la dirección y las dos siguientes la fuerza o intensidad.

En el resumen mensual se tiene únicamente el valor de la fuerza en su máximo, mínimo y media mensual.

1.8. - Evaporación

Igual que la precipitación se indica en milímetros, se tiene el total de la evaporación durante el día, la noche y total diario entre las 7 horas de un día y las 7 horas del día siguiente.

1.9. - Nubosidad.

Se indica, en octavos del cielo cubierto, la media diaria según el número de observaciones.

1.10.- Brillo Solar.

Se anota el total de la duración diaria del brillo solar en horas de décimas de hora (unos 2 a 5 metros sobre el campo de observaciones). Al final de la columna se tiene el valor máximo diario, mínimo diario y el total mensual.

2.- Resumen Mensual y Anual

En estos cuadros se resumen los promedios de los cuadros mensuales de datos diarios para todos los elementos de cada estación meteorológica. Al final de cada columna se tienen los valores máximos mensuales, mínimos y medios, resultando así los valores anuales para cada elemento.

3.- Puestos Pluviométricos.

Se presentan los valores de la precipitación diaria durante los doce meses para cada uno de los 72 puestos pluviométricos. Al final de cada columna se encuentra el valor total del mes y el número de días lluviosos.

Los datos diarios se calcularon en la misma forma que la precipitación de las estaciones de I, II y III orden.
