I N T R O D U C C I O N

El Anuario Meteorológico correspondiente al año de 1.961 se presenta en tres tomos así: Tomo I - Observatorio de Chinchiná, Tomo II - Estaciones de Primer Orden y Tomo III - Estaciones de Segundo y Tercer Orden, y Puestos Pluviométricos.

Normas Generales:

En todas las estaciones se efectúan tres observaciones diarias, así: En las estaciones de primero, segundo y tercer orden a las 07:00, 14:00 y 20:00 horas; en los puestos pluviométricos, a las 07:00, 14:00 y 17:00 horas. Las observaciones de nubosidad en Chinchiná se efectúan a las 07, 08 y luego bi-horariamente hasta las 20 horas; en las demás estaciones estas observaciones se ejecutan solamente en los tres términos reglamentarios.

Todos los datos observados y las gráficas de registro continuo de los aparatos de las distintas estaciones se remiten continuamente al Observatorio de Chinchiná, donde se realizan las operaciones conducentes a su cotejo, confrontación de lecturas a los términos con los registros automáticos respectivos, manejo estadístico y publicación.

PROMEDIOS:

Los promedios diarios de la presión atmosférica (reducida a cero grados centígrados -0°C - y gravedad normal), de la humedad relativa, de la tensión del vapor y de la nubosidad se calcula con base en la medida aritmética de las tres observaciones realizadas:

$$\frac{07+14+20}{3}$$

El promedio de la temperatura se computa según la fórmula:

$$\frac{07+14+20+20}{4}$$

Las medias mensuales y anuales de los elementos referidos se obtienen de modo similar al promedio diario.

La cantidad de lluvia (altura en mm; superficie receptora aprox. 1 m de altura y de unos 300 cm²) es la suma de las cantidades caídas entre las 07 horas y las 07 del día siguiente, anotando el total para el primer día.

Distribución de los cuadros estadísticos:

Los datos completos de las observaciones se presentan según los siguientes cuadros estadísticos:

- 1 - Datos diarios: Son la compilación por meses de las observaciones principales realizadas en el Observatorio de Chinchiná y en las estaciones de primero y segundo orden.

Se incluyen los valores observados en cada uno de los tres términos y se computa la media mensual correspondiente para cada elemento de acuerdo con los cálculos de promedio acostumbrados.

Los valores de cada término se refieren siempre a la hora oficial exacta y se cotejan previamente con los correspondientes en las gráficas de los instrumentos de registro continuo.

- i-i - Presión Atmosférica: Se dan los valores sobre 600 mm de mercurio, que es valor común en la zona cafetera, para las estaciones de primer orden.
- i-ii- Temperaturas: Fuera de los valores de la temperatura ambiental, observadas en los tres términos y de la media diaria correspondiente, se dan también los valores diarios absolutos, Máxima y Mínima en la caseta (unos 2 metros de altura), Mínima a 5 cm sobre el suelo.
- i-iii- Tensión del Vapor y Humedad Relativa: Los valores anotados en estas columnas son los observados en el término correspondiente, previamente cotejados con las gráficas del termógrafo y del higrógrafo; los cálculos

de estos elementos se **realizan según tablas psicrométricas**, corregidos a 640 mm Hg.

i-iv- **Nubosidad:** Se indica, en décimas de cielo cubierto, la media diaria según el número de observaciones.

i-v- **Brillo Solar:** Se anota el total de la duración diaria del brillo solar en horas y décimas de hora (unos 5 a 10 m sobre el campo de observaciones). Se indica también el promedio mensual que se encuentra en los cuadros de **Resumen mensual y anual (iv)**.

i-vi- **Precipitación:** Se anotan las cantidades de lluvia correspondientes a cada término; en la columna "Total" se indica la suma de la lluvia computada para cada día (7 a.m. del día siguiente).

Al final de cada columna se computa la media mensual correspondiente. El total mensual se indica al margen en la parte inferior. Este valor también se encuentra en el cuadro de resumen mensual y anual (iv).

i-vii- **Evaporación:** Se indica en mm el total de la evaporación en casetta (Balance Wild de unos 250 cm²) entre las 7 horas de un día y las 7 horas del día siguiente, anotando el total para el primer día.

i-viii- **Vientos:** Diariamente se anota a cada término la dirección del viento y su intensidad (unos 8 a 12 m de altura) según la escala Beaufort; con el fin de facilitar el manejo estadístico se codifican las direcciones del viento así: N = 16, E = 04, S = 08, W = 12, Calma 00.

ii- **Precipitación Pluvial Horaria:** En cuadros mensuales se **anota** para cada día la cantidad de lluvia, caída durante cada hora desde las 00 hasta las 24. Al final de cada día se anota el total de la lluvia en las 24 horas (el cual no debe confundirse con el total de lluvia, que se computa de 7 a

7 horas); para cada hora se da la suma mensual de lluvia. Al margen, en la parte inferior se indica la precipitación máxima en las 24 horas y el número de días lluviosos en el mes.

Estos cuadros solamente se publican para la estación (Observatorio) de Chinchiná y los de las demás estaciones se encuentran en el archivo de la Sección.

- iii- **Horas de Brillo Solar:** En cuadros mensuales se anotan los valores diarios del brillo solar registrado en cada hora durante la mañana (6 a 12 horas) y durante la tarde (12 a 18 horas). Se anotan también el total diario y el porcentaje correspondiente según el máximo posible (astronómico) para cada estación. Al final de cada columna se anota el total mensual para cada hora y la media correspondiente; también el total mensual y la media correspondiente a la duración y al porcentaje posible.

Estos cuadros, como los anteriores, solo se presentan en este Anuario para el Observatorio de Chinchiná; los de las demás estaciones se encuentran en el archivo de la Sección.

- iv- **Resumen Mensual y Anual:** En este cuadro se resumen los promedios de los cuadros mensuales de datos diarios, en tal forma que del conjunto se pueden calcular los promedios anuales correspondientes.

Como complemento de la precipitación se indica el total anual de lluvia, la cantidad y la fecha de la máxima precipitación diaria correspondiente a cada mes y el número total de días lluviosos. Los totales de precipitación y de días lluviosos en este cuadro son de 7 a 7 horas y constituyen los totales mensuales que se tienen en cuenta para todos los cómputos de la lluvia.

- v - **Frecuencias de Precipitación y Temperaturas:** Según la precipitación observada, se indican para cada término las frecuencias mensuales de las sumas de lluvia mayores de 0.1, 1.0, 10.0, 20.0, 50.0 mm.; las mismas frecuencias se indican para los totales de lluvia diaria.

Para las temperaturas se anotan para cada mes las frecuencias de días con mínimas inferiores o superiores en 1.0°C y con máximas inferiores o superiores a 2.0°C del promedio mensual respectivo y de 0.5°C para los promedios diarios.

Tanto para la precipitación como para la temperatura se incluyen también totales anuales de cada frecuencia.

Estos cuadros se presentan para el Observatorio de Chinchiná y para las estaciones de Primero y Segundo Orden.

vi- Frecuencias horarias de precipitación, más 0.1 mm., En estos cuadros se distribuyen para cada hora las frecuencias de lluvia observada (más de 0.1 mm) y se dan los totales correspondientes. La columna final "Total" se refiere al total de días lluviosos en cada mes, de las 00 a las 24 horas de cada día. Se presentan para el Observatorio de Chinchiná y para las estaciones de Primero y Segundo Orden.

vii- Frecuencias de nubosidad, Brillo solar y Vientos: Se indican las frecuencias mensuales de la nubosidad diaria inferior a 3.0 décimos (es decir días bien despejados) y superior a 8.0 décimos (días muy nublados). Como complemento de los datos anteriores se indican las frecuencias mensuales de días con brillo solar inferiores a 0.9 décimos de hora (nublado) y superiores a 9.0 horas (despejado).

La frecuencia de los vientos se indica, anotando para cada término de observación las frecuencias mensuales de las direcciones N, NE, E, SE, S, SW, W, N, NW, C (calma), y en cada columna de frecuencias se da el total anual correspondiente. Estos cuadros se presentan para el Observatorio de Chinchiná y para las Estaciones de Primero y Segundo Orden.

viii- Frecuencia horaria del brillo solar: Se anotan las frecuencias de la duración del brillo solar pleno (horas completas) y de la ausencia de brillo solar entre las 6 y las 18 horas. Estos cuadros se presentan para el Observa-

torio de Chinchiná y para las Estaciones de Primero, Segundo y Tercer Orden.

- viii-i- Se acompaña un resumen de algunas características mensuales de lluvia, en el cual se indica: Total de la precipitación mensual; Número de días lluviosos; Número de precipitaciones diurnas (7 a 20 horas, se cuenta como nueva precipitación cuando el intervalo sin lluvia ha sido mayor de una media hora); Número de precipitaciones nocturnas (20 a 7 horas); Total mensual de precipitaciones; Máxima precipitación; Duración e intensidad media por minuto; Intensidad máxima por minuto; Precipitación de duración máxima (cantidad, intensidad media por minuto e intensidad máxima por minuto). Estos cuadros se presentan para el Observatorio de Chinchiná y para las estaciones de Primero, Segundo y Tercer Orden.

ESTACIONES DE TERCER ORDEN:

Para las Estaciones Heliopluiográficas, que complementan la red meteorológica con registros automáticos de la precipitación y del brillo solar, se encuentran los datos diarios y las frecuencias mensuales horarias, así como algunas características de estos elementos como para las estaciones de Primero y Segundo Orden.

PUESTOS PLUVIOMETRICOS:

Los datos de los puestos pluviométricos, instalados en su mayoría en fincas de caficultores, quienes atienden éstas observaciones en colaboración directa con nuestro servicio por intermedio de los Agrónomos (Jefes de las Divisiones Técnicas de la Federación) en los distintos departamentos, se presentan en forma de totales diarios y mensuales con la correspondiente suma anual. Cuando los datos de un mes están incompletos el total correspondiente se da entre paréntesis. Solamente se indican los totales de lluvia y de días lluviosos, cuando los datos de todo el año están completos.

OBSERVACIONES FENOLOGICAS DEL CAFETO:

En todas las estaciones y puestos pluviométricos se realizan observaciones fenológicas, de acuerdo con las "Instrucciones para el personal Técnico de campo y agricultores cooperadores" y adicionalmente en algunas fincas cafeteras. Los datos serán la base para estudios regionales del clima y de sus efectos sobre el café.

OBSERVATORIO DE CHINCHINA:

Los datos de la estación Central, Observatorio de Chinchiná, se compilan en un Tomo separado (Tomo 1) pues, fuera de los cuadros comunes a las estaciones de Primer Orden, se acompañan cuadros mensuales de temperaturas del suelo, de observaciones bi-horarias de la nubosidad y evaluaciones horarias de Presión Atmosférica, de Temperaturas, de Humedad Relativa y de Vientos.
